## DETAILED ACTION

### *Drawings*

New corrected drawings in compliance with 37 CFR 1.121(d) will be required if this application is found to be in condition for allowance. Applicant is advised to employ the services of a competent patent draftsperson outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2 & 4-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Schneiter (USPN 4,960,970).

Schneiter discloses an apparatus and method for laser drilling in which the workpiece vibrates. An Nd-YAG laser is used for drilling and the system uses a plano-convex lens (14). The laser processing apparatus applies a laser pulse to the workpiece causing vibration, which is acoustically monitored. The method is accordance with this

invention for laser processing a workpiece comprises vibrating the workpiece by applying laser pulsed light thereto; acoustically monitoring the vibrations in the workpiece and determining vibrational changes. (abstract, figures, col. 1. lines 6-9, 60-68, col. 2, lines 1-2, 14-35, col. 3, lines 8-15)

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3 & 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schneiter, as stated above and further in view of Mosavi et al. (USPN 6,252,195).

Schneiter discloses laser drilling and the vibration of the workpiece, however, a surgical needle workpiece is not taught.

Mosavi et al. discloses forming holes in a surgical needle using an Nd-YAG laser. High energy laser pulses form a blind hole in the proximal end of a surgical needle. (abstract, figures, col. 1, lines 15-20, 49-67, col. 2, lines 57-67)

It would have been obvious to one of ordinary skill in the art at the time of the invention to make surgical needles, as taught by Mosavi et al., in the Schneiter system because the vibrational system ensures a high quality bore hole.

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See US PTO-892.
